

Artemis PP700S-A .177 PCP Air Pistol

Pistol comes with open sights, rear sight adjustable for windage but also has a standard dovetail to accept all kinds of sights from red dots to lasers. The barrel is threaded to accept an adapter so you can fit a silencer, probably a good idea as the pistol is fully adjustable on power and does give off a good crack when fired. It has an adjustable trigger, a power adjuster in the grip and a gauge so you can keep an eye on the fill pressure, it comes with a fill probe and spare seals, a shoulder stock is sold as an accessory as the pistol can be adjusted over 6ft lb

Take it from me this is a stunning accurate powerful pistol
